1 INTRODUCTION

1.1 PURPOSE

LPA needs the ability to assign a customs broker to every customer record to make sure it can track shipment related information at a customer level all the way down to a sales orders and resultant loads

The purpose of this document is to describe the functional implementation of the requirements identified by Leggett & Platt Automotive and Microsoft.

The Functional Design Document will cover the following design topics:

Design Topics	Description
Section 5.1	Modifications to Forms to support the functional design
Section 5.2	Modifications to Tables to support the functional design
Section 5.3	Modifications to Business Logic to support the functional design
Section 5.4	Modifications to List Pages to support the functional design
Section 6	Configurations and Security Considerations
Section 7	Test Cases to validate the modifications to support the functional design
Section 8	Appendix for supporting information and templates related to the functional design

1.2 ABBREVIATIONS AND GLOSSARY OF TERMS

Abbreviation	Explanation
Forms	The Forms used to enter data to support the process you are designing for.
Fast Tab	A FastTab is a container for data entry controls. A FastTab organizes fields into related chunks. FastTabs are used primarily on task pages such as details forms, dialog forms, simple list and details forms.
Tables	The tables that source the forms
Action Pane	An action pane is the part of a form that organizes and displays buttons that represent the actions the form supports.
List Pages	The list page presents the primary data of the application on a user interface that is optimized for browsing records, finding the right one, and then taking an action upon that record. The list page lets the user search, filter, sort, and preview the data.
Navigation Path	The standard navigation window presents the user with a module navigation control. This will indicate where the forms, list pages or periodic jobs are stored and how to navigate within D365.
String	Text Field

Data Source	Used for String fields that will point to data reference table, for example the field Delivery Terms is sourced from the table "DeliveryTerms".
Boolean	Yes or No value
Real	Used to indicate a Number or Currency field.

1.3 AUDIENCE / STAKEHOLDERS

Name	Position
Hollie Elliott	LPA Materials Manager
Stephanie Mitchell	LPA Plant Scheduler
Steve Shaften	LPA Logistics Supervisor
Mara Celic	LPA Purchasing Manager
Rolando Aviles	LPA Business Lead
Enrique Aldrete	LPA Solution Architect
Luke Bunch	LPA SCM Workstream Lead
Andrew Jinks	LPA SCM Business Analyst
Joseph Calicott	LPA SCM Business Analyst
Francis Moigula	Microsoft Solution Architect
Claudio Sbardella	Microsoft Delivery Architect
Ausif Hussain	Microsoft Technical Lead
Anupam Soni	Microsoft SCM Senior Consultant
Lacey Burnette	Microsoft SCM Consultant
Bob Fesmire	KPMG Business Architect
Shea Carroll	KPMG SCM Process Lead

1.4 FDD / DESIGN CLASSIFICATION

Design Classification	Included in Design? (Yes or No)
Creation or Modification to Dynamics Processes or Logic	Y
Customizations to Dynamics Forms / Screens	Y
Integration	N
Creating or Modifying Dynamics Reports or Inquiries	N

2 DESIGN SCOPE

2.1 GAP REQUIREMENTS

List the relevant gap requirements to be discussed in the scope of this FDD.

ID	Title
4462	Ability to select a customs broker for each customer

3 DESIGN ASSUMPTIONS & BUSINESS RULES

3.1 DESIGN ASSUMPTIONS

The following design assumptions have been made as part of this FDD

S. No.	Title
1.	The Broker ID field is a look-up field on the shipping carrier table in Standard D365. It is assumed that Custom Brokers would be set up in the same table as shipping carriers. This assumption has been verified by LPA SME's and the BA.
2.	The Shipping Carriers table will be used for maintaining both the carriers and customs brokers, and this applies to both the sales and purchasing side.
3.	In case of ISV (ATOS), the ISV solution will have to use the additional logic to ensure customs broker field is utilized on relevant EDI transactions. This is outside the scope of this design document, but it needs to be done during the ISV Design/Build phase. An issue has been logged in VSTS regarding the same.
4.	When a Sales Order is "released to warehouse" and an outbound shipping wave is created, the system requires the user to specify the Broker ID field manually on the outbound load. This is standard D365 functionality, and no change has been proposed to Transportation Management (in case we use loads and shipments in D365).
5.	Customs Brokers and Shipping Carriers will be maintained at each branch level (i.e. at a legal entity level in D365).
6.	The Broker ID field is not mandatory on the Customer Master, Sales Agreement, or Sales Order forms in D365.

3.2 BUSINESS RULES

The following business rules apply to this FDD

S. No.	Title
1.	The Broker ID field should copy over from the Customer form to the Sales Agreement form when a Sales Agreement is created for a Customer. It should then further copy over from the Sales Agreement form to the resultant Sales Order when a release sales order gets created in D365. If no sales agreements exist or are not created for a customer, but sales orders are being created directly, the system should still copy the customs broker field from the customer to the sales order.
2.	In D365, the Shipping Carrier table/form is in the Inventory Management Module, so from a data setup perspective the same needs to be configured in the Inventory

	Management Module. Please refer to the configuration section below in this document.
--	--

4 BUSINESS PROCESS

4.1 PROCESS DEFINITION / BUSINESS PROCESS FLOW

This section is not applicable for this FDD.

4.1.1 Business Process Narrative

This section is not applicable for this FDD.

4.1.2 Business Process Flow

This section is not applicable for this FDD.

5 DESIGN

5.1 MODIFICATION TO FORMS

5.1.1 Customer Master Form

It is proposed to add the Broker ID field (which is present in Standard D365) to the Customer Master form. This field is present on the “All Sales Orders” form in Sales and Marketing Module as well as on the “All loads” form in Transportation Management Module.

5.3 MODIFICATION TO BUSINESS LOGIC

In case a Sales Order is being created using a Release Order from a Sales Agreement, the customs broker field will need to flow down from the Sales Agreement form to the Sales Order form as shown below:

The screenshot displays two Dynamics 365 Finance and Operations forms side-by-side. The top form is the 'SALES AGREEMENT' for '0369-000071 : 0369-000001 - Magna - Ingram Windsor Seating'. The bottom form is the 'SALES ORDER DETAILS' for '0369-000532 : Magna - Ingram Windsor Seating'. Both forms have a 'Broker ID' field highlighted with a red box. A blue arrow points from the 'Broker ID' field in the Sales Agreement to the 'Broker ID' field in the Sales Order, indicating data flow. The 'Broker ID' field in the Sales Order is also highlighted with a red box. The 'Broker ID' field in the Sales Order is currently empty, while the 'Broker ID' field in the Sales Agreement is populated with 'BNSF'.

The customs broker field should populate from the Customer Master table/form to the sales order header form as soon as a sales order is created for a customer in D365. This is applicable for cases in which a sales order is created directly for a customer and no valid sales agreement exist for customer in the system:

5.4 MODIFICATION TO LIST PAGES

It should be possible to add the Broker ID field on the list pages of Sales Agreements and Sales Orders. This is required to ensure that data can be filtered in different ways by using Broker ID field.

The list pages would then subsequently be used to create Tiles and should be able to be placed on different workspaces in D365 by individual users.

5.4.1 Sales Agreement List Page

The Broker ID field should be added to the Sales Agreements List Page. It should be possible to use this field to filter and sort data in this form. It should also be possible to use this field for the purpose of creating a Tile and place it on any appropriate workspace in D365 by the user:

✓ Sales agreement...	↑ Customer account	Name	Status	Broker ID	Document title	Currency	Agreement class
0369-000001	0369-000002	Ford Motor Company - Ship to	Effective			USD	Production A

6 CONFIGURATIONS / PARAMETERS / SECURITY CONSIDERATIONS

6.1 SHIPPING CARRIERS FORM

The screenshot below shows the shipping carrier form and table. This is the same table where we will be setting up Brokers as well. Just as in the example shown below, the 'Mode' field will be utilized to specify if the record in the table is a Broker or not:

The screenshot displays the 'SHIPPING CARRIERS' form in SAP S/4HANA. The form is divided into two main sections: 'Overview' and 'Services'. The 'Overview' section contains several fields: 'Activate shipping carrier' (Yes), 'Tracking URL', 'Transportation tender type' (None), 'Pro number sequence', 'Website URL', 'Vendor account', 'SCAC', and 'Activate carrier rating' (No). The 'Mode' dropdown is set to 'Broker'. The 'Services' section shows a table with columns: Carrier service, Name, Load template ID, Transportation method, Mode of delivery, and External code. The table has one row with 'Ocean' as the carrier service and 'OCEAN' as the transportation method.

6.1.1 Modifications to Parameter Forms

This section is not applicable for this FDD.

6.1.2 Modifications to Parameter Table

This section is not applicable for this FDD.

6.2 SECURITY ROLE CONSIDERATIONS

This section is not applicable for this FDD.

7 ERROR HANDLING

This section is not applicable for this FDD.

Error #	Error Description	Infolog Error Message

8 TEST CASES

Given below are the Test Cases that are applicable for this FDD.

8.1 TEST CASES

VSTS ID	Test Case Title
13860	Create a stand-alone sales order and enter a customs broker on the sales order
13863	Create SA with customs broker selected then create an SO off the SA then change the customs broker on the SA and ensure that the existing SO doesn't change and that any new SOs created have the updated customs broker value
13861	Edit the customs broker value on a sales agreement and a sales order and ensure it can be edited or changed
13862	Ensure the customs broker field can be queried against and tiles created using a filter on this field
13859	Enter a customs broker on an SA and then create an SO off of the SA to ensure the customs broker defaults onto the SO

9 APPENDICES

This section is not applicable for this FDD.
